TELEMATIC DONGLE : D-CAR E

The DCar-E is an autonomous, multi-purpose automotive unit, enabling data to be acquired and processed on the on-board automotive network (CAN), and restituted on a server for various applications (web platform, mobile application, etc).

Highlights :

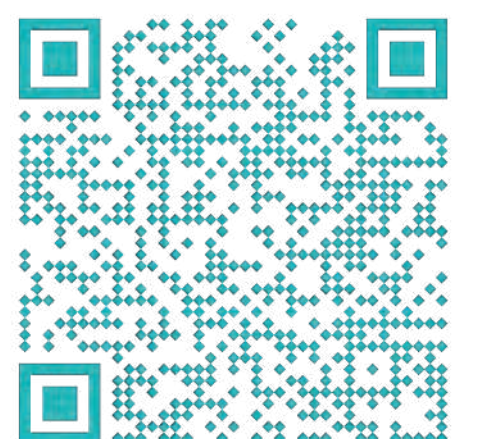

- ▶ Low power consumption with wake-up call via APC, CAN BUS or SMS
- ▶ Low-cost design
- ▶ Plug n play installation
- ▶ Remote management of the DCAR-E unit
- ▶ Full hardware & software integration by Dunasys

Features :

- OBD connection, (no external power supply required other than OBD socket)
- CAN bus data collection and analysis (mileage, speed,battery voltage, etc)
- Dual MQTT server : a client server for data and a Dunasys server for updates. Vehicle template loading possible via MQTT
- Geolocation and GNSS (GPS/GLONASS/BEIDOU/GALILEO)
- Sending and receiving of SMS (borker reading, UIN, APN)
- APC detection for vehicle start up
- Broker configuration via SMS
